1.1.2	**It has been observed that product certificates were not added to some sales in the traceability records and that overseas sales were not recorded. Additionally, January sales are also not present in the traceability records. It has been observed that overseas sales have not been fully included this year either.** **Customer CA:Traceability has been updated. It will be kept up-to-date. Accounting records are one month behind, so January sales are not visible. (Since VAT is deducted on the 25th of the month, the documents have just been entered. I will forward them to you when our Financial Advisor sends them to us.)** **EO Comment:The updated traceability table showed that only sales for February did not have TR product certificates entered. It was also noted that these applications were newly submitted to Ceres.** **Please update your traceability table with this data after your product certificates have been submitted.** **The issue regarding accounting records was also discussed with the customer over the phone. It was noted that the control date coinciding with a period close to the turn of the year prevented these data from being obtained clearly and on time. For the 2027 control, accounting records will be obtained covering the period from January 1, 2026, to the date of the control.** **It will be recommended that the control be brought forward to an earlier date.** **Translated with DeepL.com (free version)**
